Bus Washer Renovation

Project Description

CH2M HILL's Vehicle Maintenance Facilities (VMF) Design Group provided design and construction services for transit bus washing facilities at Phoenix's North Division and South Division operating garages to replace the existing facilities.

Two significant issues influenced the design phase: coordinating utilities with the new equipment and integrating the wash water reclamation system. During the construction phase, CH2M HILL's responsibilities included coordinating with the contractor and other disciplines, reviewing and distributing shop drawings, attending project meetings, reviewing pay applications, inspecting new equipment, and managing startup and testing.
